

## City of Billings Park II Garage

### Location

Billings, MT

The project scope included a 6-tier parking structure with a bank drive-through facility on the ground level which ties into an existing parking structure. This structure spans the city alley and maintains a 15 foot head height clearance. The entire parking garage now covers approximately 3/4 of a city block.

The project's time frame required continual operation through the winter months. Several 10,000 square foot slab pours had to be enclosed and heated at their 30-50 foot elevated heights for work to progress.
