

J & H Office Equipment

Location

Billings, MT

This building incorporated a pre-engineered metal building structural and roofing system with load bearing masonry and steel stud framing system to present a truly unique appearance.

The building was divided into 4 tenant spaces each with a bathroom and warehouse. Each warehouse is served by its own overhead door. The exterior is maintenance free masonry, EIFS and prefinished architectural sheet metal. Thermally the building was built to exceed the energy code in effect at the time.
