

Richland County Community Services Building

Location

Sidney, MT

The building has structural steel supports with concrete slabs on deck for the 1st and 2nd floor. The exterior walls are structural insulated panels (SIP). Exterior has a brick veneer with metal siding and a metal roof.

The heating system for this project is a geothermal well system with 105 wells 300 feet deep. This highly efficient system is used to heat and cool the building as needed. All necessary systems are back up by a generator powered by LPG or Natural Gas.
