

Sidney High School Multi-Purpose Room Addition

Location

Sidney, MT

This project consists of a 10,100 square foot Multi-Purpose Room addition with wrestling/weight room.

This project was started late in the year and cold weather was approaching. The foundation system consisted of helical piers that required additional depth.

Extremely wet and cold weather in the spring caused a slight delay in building and it became necessary to work with the architect and owner to value engineer the project to bring it in on time and within budget.
