

## Sidney High School Music Wing Addition

### Location

Sidney, MT

The music wing portion of this project consisted of remodeling the existing music room and office including the addition of new music labs, practice rooms, computer labs and offices.

The new addition required approximately 40 helical piers that ended up hitting bad soil which required going an additional 20-25 feet deeper than anticipated.

The structure consists of masonry block walls for interior and exterior walls; the exterior has a 4 inch masonry block veneer.
